Apps and software to install

- Change Computer name
 - Go to System Preferences –General - About – change computer name to **Macbook+serialnumber** then press Enter
- Search for Software Update in the System Preferences
 - Click on secure Responses

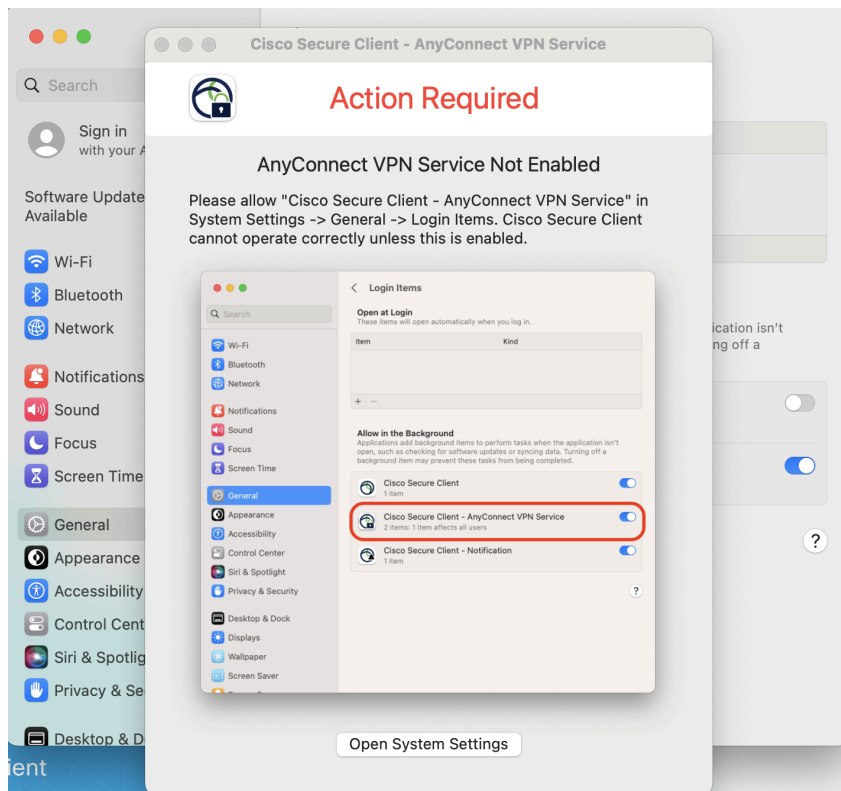

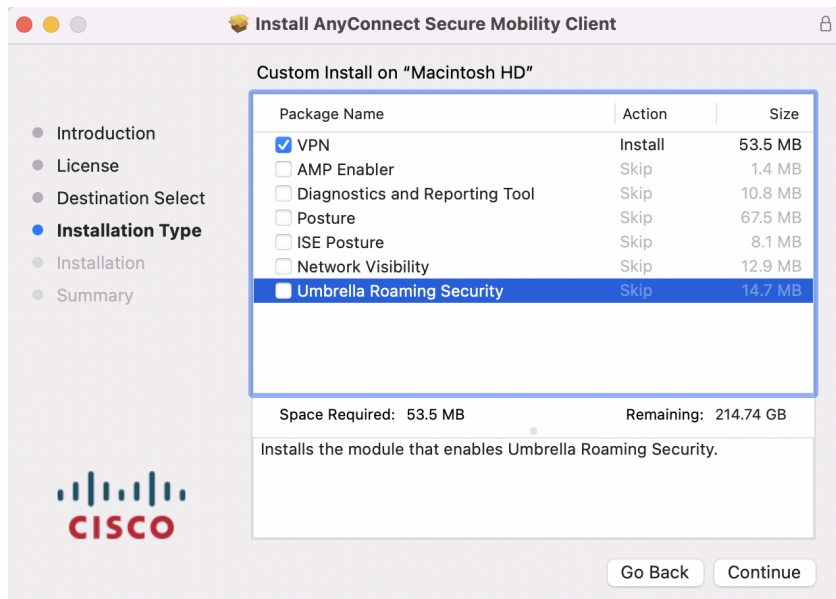

- Enable Install macOS updates and Application updates toggles

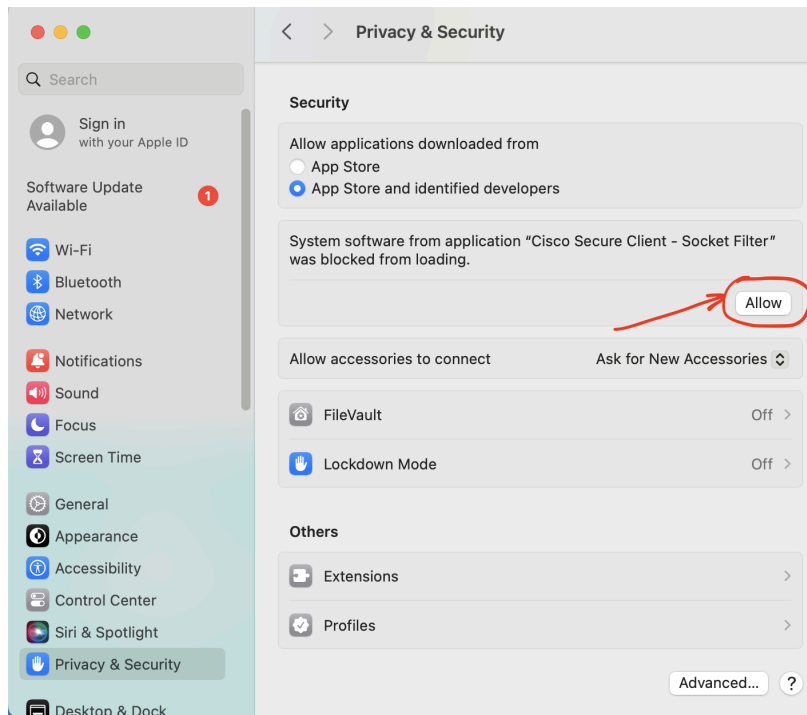

- Run system update and make sure the device is running the latest MacOS
- Install [Chrome](#)
 - Enable auto update for Chrome in privacy settings - Full Disk Access.Toggle:

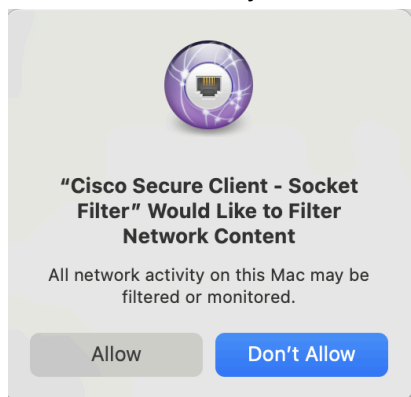

- Google Chrome
- GoogleUpdater
- Install [VPN](#) (Select only VPN in the list of Installation Type)

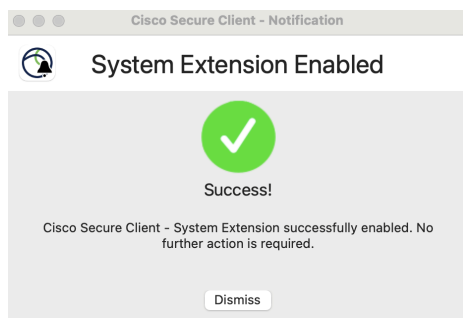

The installation will prompt you to allow the app in system preferences

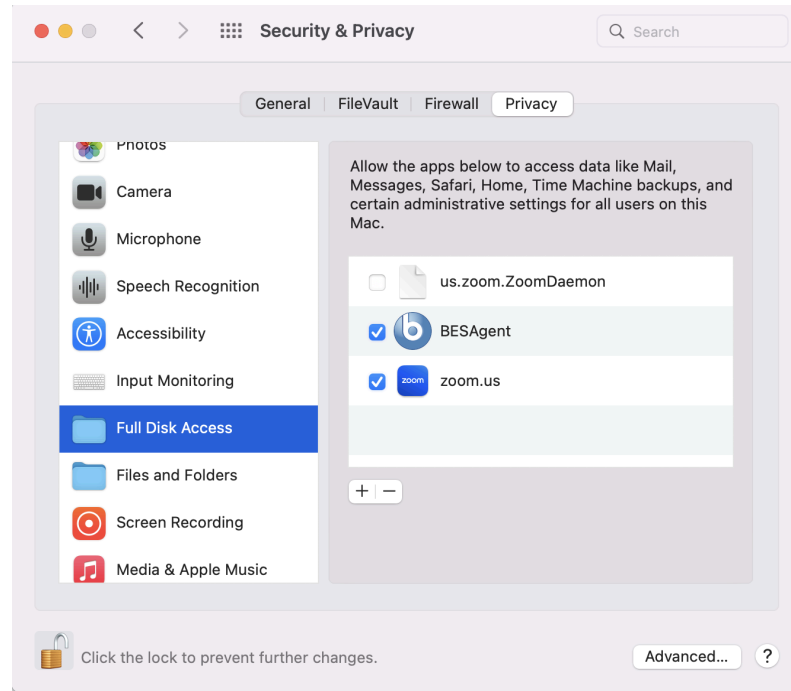

And allow cisco anyconnect filter connection. Click allow there as well.

Successful installation should be confirmed by the following window

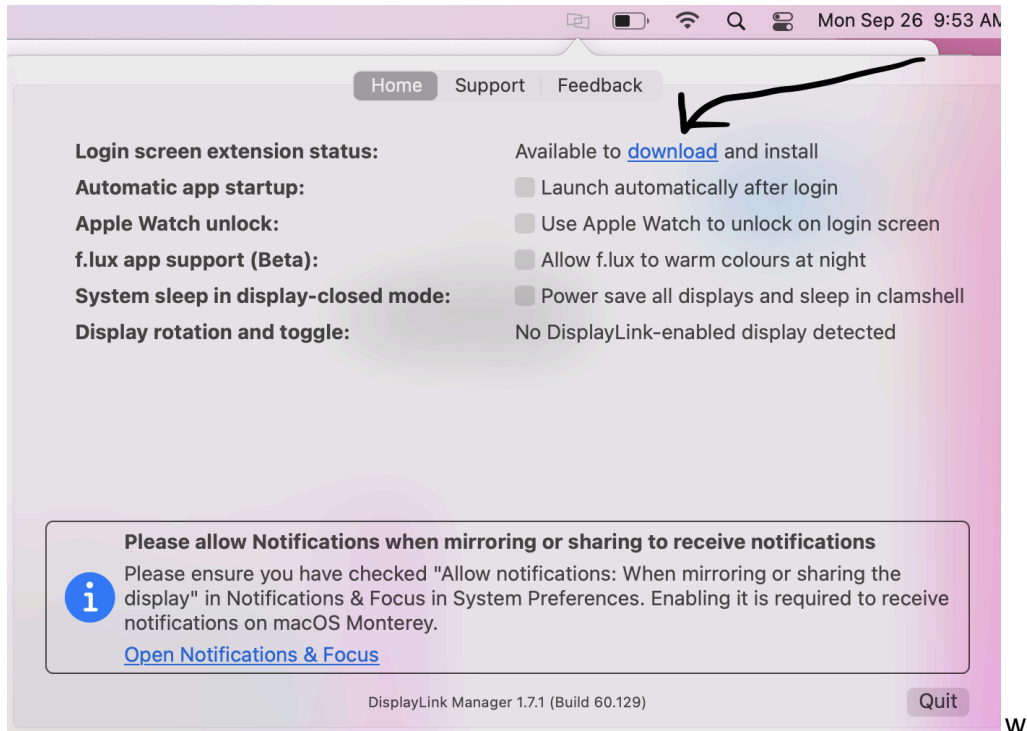

- Install [Zoom](#) and sign in to it. Start a meeting and start screen sharing. It will take you to System Preference – Security and Privacy where you will need to allow zoom in all Accessibility , Full disk access and Screen Recording
Make sure to allow automatic updates in Full disc access menu
- Install [Bigfix](#)
 - The file will be blocked so you need to allow it from Security & Privacy
 - After installation go to Privacy settings and enable BESagent in Full disk access

- Install [Display Link](#) (you need to accept terms and conditions to download)

Click on the newly appeared icon for the display link then download “Login screen extension status” , click “download” and install the package.

Check Security and Privacy settings - Screen Recording - enable Display Link

- Install [Cortex XDR](#) and [Insight](#).
- Install Office
 - The download [package](#) has the Microsoft_Office_365 desktop version. You need to install it. It will ask for activation which will be provided separately.
- Create a bomgar session and join the session to update all of the privacy settings needed to share the screen. You will need to enable Remote Support in Accessibility, Full disk access and Screen recording.
- Download and install [creative cloud](#)
 - Sign in and install Adobe Acrobat
 - Sign out of adobe when finished
- Enable FileVault and save backup recovery key...
- Install [Workspace One](#)
 - Instructions [here](#)

- Create **staff** account with **admuser1** password (emtech password for end user accounts)
- Delete all the files from downloads folder and empty the trash
- Clear history and browsing data in safari and chrome (log out of nyu home)

Logout of admin and login as user(it could be staff or the account of the end user)

Apply Initial settings for user account

- Analytics – Continue
- Screen Time – Set up Later
- Siri – Continue
- Select a Siri Voice – Voice 4 – Continue
- Setup “Hey Siri” – Set Up “Hey Siri” Later
- Improve Siri & Dictation – Not Now – Continue
- Touch ID – Set up Touch ID Later – Continue
- Choose Your Look – Auto – Continue

Launch Display Link and enable “Launch automatically after login”

Launch Microsoft Word – Skip Sign in – Start using word

Launch zoom – keep zoom updated – done

Launch Cisco Anyconnect and sign in to vpn

Start Chrome – Uncheck all checkboxes - start google chrome

Open AppStore and click Not Now for notifications. Install updates available for standard apps (Keynote, Numbers, Imovie, Pages)

Sign out of all accounts. The Macbook should be on user select screen (where user can select which account to sign in) when you shutdown
